

Hourly Dashboard Operating Guide

Take 5 Hourly Dashboard · Store Manager Guide

Purpose

A live, benchmarked view of each store's day so managers can act while it still matters; especially on staffing and add-on services. Every number compares today to a normal day for this store, weekday, and hour.

Cadence

Daily — At end of day, store management reviews the day's results with the team.

Weekly — At end of week, the store manager reviews performance with the district manager.

How to Access

Open the dashboard link in any browser and enter your access code; your store loads automatically. The page auto-refreshes about every 30 minutes; tap Refresh for the latest any time, no logout needed.

Key Metric	Definition	How to improve using the dashboard
4-Week Comp.	Today's performance compared to the 4-week average for the same day and time. Positive values indicate ahead; negative values indicate behind.	Watch this metric through the day; the moment it turns negative, add staff or push flow before you fall further behind
Cars	The number of cars served so far today, measured against pace	Track cars against the pace line and the estimated close; if you are behind by midday, act while there is still day left
Net Revenue	Total sales so far today, with a pace and a projected close	When net revenue trails its projection, use the tiles to spot the weak lever (cars, ARO, or Big 4) and work that one
ARO (\$125)	Average ticket, net sales divided by cars; the goal is a flat \$125	Watch the ARO tile against the \$125 line; if it is red, drive attachment on the next cars to pull it up before close
Big 4 (53%)	Percent of cars taking a priority service (Air Filter, Cabin Filter, Wiper Blade, Coolant Exchange)	Use the per item bars to see which service is lagging its target, and coach that specific one at write up
LHPC (1.10)	Labor hours per car	Read LHPC against pace; if labor is high while cars lag, flex hours down, and staff up ahead of the busy hours the map shows
Task	This measures the percentage completeness of daily task	A reminder of each day's responsibilities

Central MO · opened 8:03 AM

Color Code

Green — Good

Amber — Watch it

Red — Act now

How to Read Your Dashboard

This page tracks your store in real time against a normal day for this weekday and hour. The top bar shows your store name and number, today's date, and the last update time — a green live dot means the numbers are current.

Your Six Key Numbers

The tiles across the top give a fast read on the day — cars, average ticket, net sales, Big 4/5 attachment, and labor. Each is colored green (good), amber (watch it), or red (act now).

Target

Target compares your projected finish based on your current performance to an end of day target. A target can be comprised of the average of your last four same-weekday results, a predetermined goal, or a boosted 4-week average. Plus means ahead, minus means behind. Target appears throughout the page.

Cars

Cars served throughout the day. The solid line is your running total; a green dashed line projects the finish; a red line is the target for that day. Click on the *TODAY* box to have a drop down appear that shows your last 4-week average for this day.

ARO — Average Repair Order

Your average ticket — net sales ÷ cars, goal \$125. Below \$125 it turns red; raise it by attaching more services per car.

Net Revenue

Total net sales so far today. The green dashed line projects where you'll finish at the current pace. Red dashed line is the target for today. The bottom box breaks down your percentage of revenue that comes from fleet and individual costumers.

Big 4 Attachment

Share of cars that took a Big 4 service — air filter, cabin filter, wiper, or coolant (target 53%). It's your strongest ARO lever: inspect every car and recommend clearly.

LHPC — Labor Hours Per Car

Labor hours worked ÷ cars served (target 1.10). Above target means overstaffed for the traffic; below means stretched thin. Flex hours as pace moves.

Score Card

Download a clean, one-page PDF of the day's numbers — great for shift handoffs, team huddles, or sharing with your district manager. There are also one-pagers for the Last 7 days and Yesterday

Operational Detail

Expand for the finer metrics behind the headline numbers: differentials, materials %, average service time, coupons, discounts, new vs. repeat customers, gross sales, and labor hours.

Pace

= vs the simple 4-week same-weekday average by this time. Estimated close = the recency-weighted 4-week average (40/30/20/10) scaled by pace (clamped 0.7–1.5x).

Good to Know

- Auto-refreshes every 30 minutes — tap Refresh any time for the latest, no logout needed.
- The What's Driving Value panel (top of the dashboard) flags which levers — traffic, ARO, or Big 4/5 — are moving your day. Read it first.
- This page can be viewed and interacted with via a smart phone
